

EYFS

First month of school

As we completed our first successful month, we are proud to share the areas that we focused on these three weeks on getting the children to know their school and classroom routine. They are also learning how to interact with their peers. We also focused on cooperation, sharing and helping others.

Our theme was "All about me". The first week we learned about the "Golden rules" followed by "Emotions". We also learned about the "Good touch and Bad touch" in detail with role play and puppet show. Numeracy- We focused on Numbers from 1 to 10 with various activities like sequential counting, Number hopscotch, games etc. Recognition of numbers 1 to 5 is done on a daily basis. We also sang shape rhymes and number rhymes during circle time.

Literacy- We started our first group of Jolly phonics by introducing letters s,a,t,i with the phonic sounds and actions. Also we watched videos of Jolly phonics. Story time was done on daily basis and we learned lot of new vocabulary during this month. Children look forward to coming to school because they are excited for the extra-curricular activities every day.

I-Spy Science

A science fair was conducted on the 27th of July, at Nalapad Academy, to show the children how science can be fun. Interactive scientific experiments and displays taught the kids various concepts in science, right from magnets to robotics. Children learnt about density of fluids, how magnets work, and what non-Newtonian fluids are. They were excited to make their own slime, kaleidoscope, and even their own rocket piggy-bank. Overall, the science fair was a fun learning experience for the children and their parents.

PARENT TEACHER INTERACTION

Our primary section had its first Parent-Teacher Meeting on the 27th of July. The children, the parents, and the teachers all met to assess the development of the child over the course of the first month. At Nalapad Academy, we believe that a child's holistic development will happen only when the parents, the child and the teachers work together. This was an opportunity for the parents and the teachers to discuss the areas of excellence and the areas of improvement..

PRE-ASSESSMENTS

Pre-assessments, are assessments which assess a student's strengths, weakness, knowledge, and skills prior to instruction. Pre-assessments help measure the true learning of the child. We as teachers would be able to see what our students are capable of.

Setting clear expectations help students begin to focus on the key topics that will be covered throughout the lessons. This also gives our students the opportunity to set educational goals for the coming weeks.

CAMBRIDGE PRIMARY

First day of school

"School bells are ringing loud and clear; vacation's over, school is here".

A school is only a building of bricks and wood until it gets its life with its students. On 17th June 2019, Nalapad Academy embarked on its journey towards the holistic development of its students. First day of school is always filled with lot of excitement for teachers as well as the students. The small young innocent kids are here with alacrity in their hearts, dreams and curiosity in their eyes, spring in their steps as they bring their small feet into this new insatiable world of knowledge, imagination, creativity, friendship, love and emotions. A school is their passport for a bright and promising future.

Here at Nalapad Academy, we believe that each child is unique, talented and a masterpiece in his/her own way and we intend to instill the right education and value systems in them by nurturing their hidden potential. For it's not only the grades that makes a child talented but his/her overall development.

The first day of school was a mixed bag of emotion for all alike (Children, School Management, Teachers and Parents) as we were just about getting to know each other, trying to build a bond of love and trust. We at Nalapad Academy were entrusted by the parents for taking care of the individual needs of food, comfort and social values of their respective wards. Teaching classes also started on the same day in fun interactive manner as it is important to put a child on the correct path of international education right from the start. *Here's wishing all the students of Nalapad a great future ahead.*

PLANETARIUM VISIT AND ACTIVITY

On the 12th of July, the children of primary and foundation stage took a field trip to the **Jawaharlal Nehru** Planetarium. We watched the 3D show on the topic of Solar System. The children also enjoyed exploring the science park around the planetarium. As a part of our learning from the field trip, the students put up a show about the solar system, each student taking on the role of a planet
